

The Centre for Clinical Epidemiology & Evaluation (C2E2) undertakes research and training and provides evidence-based advice to advance a sustainable health system for British Columbians.

How are health and financial burdens affecting our community?

How can we improve patient health outcomes?

# C2E2

We are committed to developing research methodology and providing statistical expertise for health care policy makers and health researchers. We also give evidence-based advice to help deliver high quality, safe and effective care.

## Research Programs

Clinical research methodology

Health services and outcomes research

Adverse drug events

Systematic reviews evidence synthesis

Culture, ethnicity and health

Long term care

Health economics

## Health Research Areas

Looking beyond traditional boundaries

We synthesize our broad range of health research into four areas:

**Clinical research**  
Explore the effectiveness and efficiency of health care interventions including disease prevention measures

**Applied health services and health economics**  
Investigate the organization, management, financing, delivery and outcomes of care

**Knowledge translation**  
Promote and facilitate evidence-informed decision making at practice, managerial and policy levels

**Patient Engagement**  
Involve patients and public members in all aspects of research

## Excellence through Collaboration

### Building strong and long-lasting research partnerships

We focus on research collaboration that allows the highest quality of clinical and health services research. We partner strategically to maximize our research impact for the benefit of our society and Canada's economy.

We provide **expert consultation** and **project support** for health authorities, governments and non-profit health care agencies in the areas of biostatistics, health economics, health technology assessment, evidence synthesis, qualitative and mixed-methods research, policy analysis and patient-oriented outcomes. We also **engage** and **work collaboratively** with clinicians and researchers in grant application development and on funded research projects.

# Innovative Research with Direct Health Impacts

Leading the way to healthy living and a stronger health care system

## VCHRI

We focus on discovery and translational research that directly impacts health outcomes.

Vancouver Coastal Health Research Institute (VCHRI) is one of Canada's top funded health sciences research centres, receiving \$80-100 million in research funding every year. VCHRI is the research arm of Vancouver Coastal Health Authority and the health partner of the University of British Columbia.

## A Dynamic and Diverse Research Environment

Providing best care, cutting-edge treatment and innovative solutions

VCH Research Institute is a major player in BC's Health Research Industry — there are research centres, research programs and many evolving research areas generating world class research outputs leading to health and economic benefits for British Columbians.

“What sets us apart is our rich, collaborative and multidisciplinary environment. We work together to create opportunities for novel and advanced treatment and prevention options to health service delivery.”

— Dr. W. Robert McMaster  
VCHRI Executive Director

Together we make a difference.
