Do Health Services in Canada Measure the Outcomes That Matter to Patients? A Value-Based Healthcare Perspective

Shannon will begin with an objective to define value from the perspective of patients through a value based healthcare lens and describe various health system perspectives on value and cost. Next, Shannon will describe how value based health care focuses on achieving health outcomes that matter within groups of patients with shared health conditions, presentations and/or needs and reflect on the terminology 'patient-oriented or patient-important' outcomes. Further exploration of measures in health care delivery at micro, meso and macro levels and in research will follow with examples. Finally, a commentary on what the Canadian healthcare system (with examples) and researchers could and should do to incorporate outcome measures as a means to monitor and improve value for patients and for the health system.

Presenter

Shannon Jackson, MD FRCPC MSc(HCT)

Hematologist, St. Paul's Hospital and West Coast Hematology

Co-Head, Division of Hematology, Providence Health Care

Clinical Professor, University of British Columbia

Medical Director, Bleeding Disorders Program of British Columbia, Adult Division

Physician Lead, Value Based Health Care, Providence Health Care

C2E2 Spotlight is held monthly on Mondays from 12:00 pm to 1:00 pm. To attend in-person or virtually please contact pamela.lee@ubc.ca.
