COURSE OVERVIEW

This 3-day course offers an introduction to methods for observational studies across health services, health outcomes and public health research. Its goal is to equip multidisciplinary teams with the essential tools needed for planning and analyzing observational data. Key topics include developing an analytical framework, designing dataset creation strategies, and planning data analysis. This course is ideal for clinicians, healthcare professionals, hospital administrators, residents, health services researchers, data analysts, and students.

Learning Objectives:

Participants will develop competencies and skills in:

1. Presenting study questions within the framework of observational studies.
2. Developing protocols for dataset creation.
3. Planning effective analyses of observational data.

COURSE INSTRUCTORS

Boris Sobolev
Senior Scientist, C2E2

Lisa Kuramoto
Statistical Analyst, C2E2

Nicole Hu
Junior Statistical Analyst, C2E2
